No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (222 Rosewood Drive, Danvers, Massachusetts 01923) for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1995 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 23

NUMBER 1, MARCH 1995

RADHAKRISHNAN P. IYER, DONG YU, AND SUDHIR AGRAWAL. Prodrugs of Oligonucleotides: The Acyloxyalkyl Esters of Oligodeoxyribonucleoside Phosphorothioates	1
A. KUTNER, H. ZHAO, H. FITAK, AND S. R. WILSON. Synthesis of Retiferol RAD ₁ and RAD ₂ , the Lead Representatives of a New Class of des-CD Analogs of Cholecalciferol	22
T. K. WYRZYKIEWICZ AND D. L. COLE. Stereo-Reproducibility of the Phosphoramidite Method in the Synthesis of Oligonucleotide Phosphorothioates	33
VIPIN MENON, CHANG-TAI HSIEH, AND PAUL F. FITZPATRICK. Substituted Alcohols as Mechanistic Probes of Alcohol Oxidase	42
JAYANTHI S. RAJAGOPALAN, CONSTANCE M. HARRIS, AND THOMAS M. HARRIS. The Role of Phenolic Groups in Vancomycin-Type Glycopeptide Antibiotics	54
U. NEUMANN AND M. GÜTSCHOW. 3,1-Benzothiazin-4-ones and 3,1-Benzoxazin-4-ones: Highly Different Activities in Chymotrypsin Inactivation	72

NUMBER 2, JUNE 1995

WOUTER HENDRIKS, ANTHONY WOOLHOUSE, MICHAEL TARTTELIN, AND PAUL MOUGHAN. Synthesis of Felinine, 2-Amino-7-hydroxy-5,5-dimethyl-4-thiaheptanoic Acid	89
JEFFREY KERNS, SRIRAM NAGANATHAN, PAUL DOWD, FRANCES M. FINN, AND BRIAN CARR. Thioalkyl Derivatives of Vitamin K ₃ and Vitamin K ₃ Oxide Inhibit Growth of Hep3B and HepG2 Cells	101
DALLAS L. RABENSTEIN AND PAULINE L. YEO. Thiol/Disulfide Exchange Reactions of Captopril and Penicillamine with Arginine Vasopressin and Oxytocin	109
WILLIAM A. BUBB, HILARY A. BERTHON, AND PHILIP W. KUCHEL. Tris Buffer Reactivity with Low-Molecular-Weight Aldehydes: NMR Characterization of the Reactions of Glyceraldehyde 3-Phosphate	119
MARY C. O'SULLIVAN AND JOHN M. SCHWAB. Verification of the Mechanism of Oxidative Ring Expansion in the Biosynthesis of Stipitatic Acid by <i>Talaromyces stipitatus</i>	131
JAMES G. ROBERTSON, MICHAEL S. BERNATOWICZ, ADIL M. DHALLA, BARRY B. MUHOBERAC, JOSEPH YANCHUNAS, GARY R. MATSUEDA, AND JOSEPH J. VILLAFRANCA. Inhibition of Bovine Brain Nitric Oxide Synthase by α -Amino and α -Carboxyl Derivatives of N ^G -Allyl-L-arginine	144
FRANCES M. FINN, KEITARO YAMANOUCHI, GAIL TITUS, AND KLAUS HOFMANN. Trifunctional Reagents for Derivatizing Sulfhydryl Groups	152

ROBERT L. D'ORDINE, PIOTR PANETH, AND VERNON E. ANDERSON. ^{13}C NMR and ^1H - ^1H NOEs of Coenzyme-A: Conformation of the Pantoic Acid Moiety	169
---	-----

NUMBER 3, SEPTEMBER 1995

REGULAR ARTICLES

SOOK LEE, BYUNG KEUN HWANG, YOUNG CHAN MYOUNG, AND JUNGHUN SUH. Carboxypeptidase A-Catalyzed Hydrolysis of <i>O</i> -(α -Acylamino-2-styrylacryloyl)-L- β -phenyllactates: Search of Specific Ester Substrates Hydrolyzed through Accumulation of Intermediates . . .	183
FA ZHANG AND GLENN DRYHURST. Reactions of Cysteine and Cysteinyl Derivatives with Dopamine- <i>o</i> -quinone and Further Insights into the Oxidation Chemistry of 5- <i>S</i> -Cysteinyl dopamine: Potential Relevance to Idiopathic Parkinson's Disease	193
MYEONG YUN CHAE AND GORDON A. HAMILTON. Reactivities of Oxalamidines (<i>N,N</i> -Oxalins)	217
ZHENG WU, XUE-MING SHEN, AND GLENN DRYHURST. Oxidation Chemistry of 5-[[3-(2-Amino-2-carboxyethyl)-5-hydroxy-1 <i>H</i> -indol-4-yl]oxy]-[3-(2-amino-2-carboxyethyl)]-1 <i>H</i> -indole: A Putative Aberrant Metabolite of 5-Hydroxytryptophan	227
ATSUSHI KAMITAKAHARA AND JULIANTO PRANATA. A Computational Model for the Stereoelectronic Effects of Carboxylate Lone Pairs . .	256

CONFERENCE PROCEEDINGS

RONALD KLUGER AND GORDON A. HAMILTON. Fourteenth Enzyme Mechanisms Conference.	263

AUTHOR INDEX FOR VOLUME 23	528
SUBJECT INDEX FOR VOLUME 23	530

Information for Authors

Bioorganic Chemistry publishes accounts of research that are at the interface of chemistry and biology. The guiding principle that the Editorial Board will follow in accepting manuscripts for publication is that the research either use the principles and techniques of organic and physical organic chemistry in attempting to solve some problem of relevance to biology, or describe chemical studies that are inspired by some biological observation. Within this context, manuscripts suitable for submission are ones that deal with such topics as: characterization of the chemistry involved in new enzymatic reactions and metabolic pathways; elucidation of enzyme mechanisms and structure; application of kinetic, isotopic, stereochemical, and spectral techniques to the study of enzymes and metabolic pathways; investigations of chemical model systems for enzymes, peptides, and other biological molecules; studies related to coenzyme structure and reactivity; development of catalyst systems that mimic enzymes and coenzymes; achievement of useful organic transformations by the application of enzymes; description of new chemistry that results from some finding in biology; development of mechanism-based and active site-directed inhibitors for enzymes, and characterization of the chemistry associated with their inhibition; investigation of the structure and mechanism of action of pheromones and other chemical communicants; determination of the molecular mechanisms for the action of hormones and of the molecular basis of pharmacology; elucidation of the principles involved in receptor site recognition; chemical modifications of nucleic acids and the application of such modifications to the manipulation of genetic material.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Bioorganic Chemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Although the journal will be devoted primarily to the publication of regular articles, Reviews and Preliminary Communications will also be published. In addition, Book Reviews and a Correspondence section will appear from time to time.

Regular articles must feature novel, previously unpublished material or represent full accounts of findings published earlier in preliminary form.

An acceptable *Review* may embrace the results of various workers in a given area or may feature recent developments from the author's own laboratory. A review that is distinguished by a novel interpretation or representation of earlier findings is especially suitable. The Editor welcomes inquiries concerning the suitability of a particular topic for a review article.

Preliminary Communications will receive accelerated publication and should describe particularly novel and significant new findings. They should be accompanied by a brief abstract and should not exceed 5 printed pages in length (approximately 3000 words), including references, tables, and figures.

Letters to the Editor offering interpretations of data that are different from those published by other authors will be entertained and, along with the original authors' rebuttal, will be considered for inclusion in the *Correspondence* section. It is hoped that this section will offer a forum where points of contention concerning various topics of interest to the field of bioorganic chemistry can be discussed in print. From time to time this section will also include announcements and summaries of meetings that are of interest to bioorganic chemists.

Address all submitted manuscripts and correspondence to:

Dr. Gordon A. Hamilton
Editor, *Bioorganic Chemistry*
Department of Chemistry
152 Davey Laboratory
Pennsylvania State University
University Park, Pennsylvania 16802

Manuscripts should be written in a clear and accurate fashion with careful attention to detail. Submit manuscripts (in English) in quadruplicate (one original and three copies), with copies of graphs, drawings, organic structural formulas, etc., suitable for direct reproduction. All material (including tables, legends, reference lists, and footnotes) should be typed double spaced on one side of $8\frac{1}{2} \times 11$ -in. white bond paper with 1-in. margins on all sides. Each page of the manuscript should be numbered. Page 1 should contain the article title, author's name (without degrees), affiliation, a short running title (not exceeding 45 letters and spaces), an address to which proofs should be mailed, and fax and e-mail numbers for the corresponding author. Page 2 should contain a short abstract. Acknowledgments may be included as a separate section.

All nomenclature should be simple, unambiguous, and in conformity with the conventions developed by Chemical Abstracts and the International Union of Pure and Applied Chemistry. For further information regarding nomenclature, authors are advised to consult the Instructions to Authors of the *Archives of Biochemistry and Biophysics* (1995) **316**, xiii–xxviii. *Reprints are available from the Publisher.*

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Abbreviations should be in accordance with the International System (SI) as adopted by the 11th General Conference on Weights and Measures. Common abbreviations are: meter, m; centimeter, cm; millimeter, mm; micrometer, μm ; nanometer, nm; kilogram, kg; gram, g; milligram, mg; microgram, μg ; nanogram, ng; milliliter, ml; microliter, μl ; molar, M; millimolar, mM; micromolar, μM ; normal, N, millicurie, mCi; microcurie, μCi ; counts per minute or second, cpm or cps; disintegrations per minute or second, dpm or dps; centigrade, $^{\circ}\text{C}$; seconds, s; minutes, min; hours, h; standard deviation, SD; standard error, SE; percent, %; melting point, mp; boiling point, bp; calorie, cal; kilocalorie, kcal; nuclear magnetic resonance, NMR; infrared, ir; ultraviolet, uv; number, No.; Ångstrom units, Å; cycles per second, Hz; parts per million, ppm; Equation, Eq.

Tables must appear on a separate sheet with a descriptive title typed double spaced above the table. Tables must be numbered consecutively with Arabic numerals in order in the text.

Figures and graphs are to be numbered consecutively in Arabic numerals and cited in order in the text; legends should be typed double spaced on a separate sheet. Graphs should be plotted with black India ink on white paper no larger than $8\frac{1}{2} \times 11$ in., with coordinates properly labeled; grid lines that are to show should be inked in black. Original drawings no larger than $8\frac{1}{2} \times 11$ in. (21×27.5 cm) are preferred. The following standard symbols should be used in the legends to the figures because they are readily available to the printers:

▲ □ ■ ○ ● ⊙ × ◇ ◆

Photographs should be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible. Illustrations in color can be accepted only if the authors defray the cost.

Structural formulas and chemical equations should be typed or drawn with care, and arranged to fill space economically. Since chemical structures will be reproduced directly from manuscript copy, authors are asked to prepare such material using appropriate templates and to check it carefully before manuscript submission.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet, starting with the title; in tables they should be noted by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by underlined Arabic numerals in parentheses. They must appear on a separate sheet, listed in numerical order, i.e., in accordance with order of citation in the text. Styling of references should conform to the following format (authors should refer to *Chemical Abstracts Service Source Index*, 1985, for styling of journal titles):

1. HAMILTON, G. A., AND BUCKTHAL, D. J. (1982) *Bioorg. Chem.* **11**, 350–370.
2. JARDETSKY, O., AND ROBERTS, G. C. K. (1981) *NMR in Molecular Biology*, pp. 417–447, Academic Press, New York.
3. OPPENHEIMER, N. J. (1982) in *The Pyridine Nucleotide Coenzymes* (Everse, J., Anderson, B., and You, K., Eds.), pp. 51–89, Academic Press, New York.

Proofs will be sent to the corresponding author. Authors will be charged for excessive alterations.

Fifty reprints of each article will be supplied free of charge. Additional reprints may be purchased; an order form will accompany proofs.

Personal computer disks. Manuscripts may be submitted to *Bioorganic Chemistry* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).
